

SQL Defrag Studio 2009

Automated Defragmentation Software for SQL Server

AT A GLANCE

SQL Defrag Studio is the most cost-effective solution on the market for defragmenting your SQL Server 2005 and 2008 indexes. Our best software to date, SQL Defrag Studio will speed up a slow SQL Server and deliver impressive performance results to keep your servers fast and your users happy!

DEMO VERSION

- Fully featured analysis, defrag and reporting; scheduling limited
- 14 day trial license
- Technical support included free via email and online Live Support Chat
- www.norbtechnologies.com/downloads.aspx

LICENSING

- Single user license \$495
- Technical support included free via email and online Live Support Chat
- Free upgrades for 12 months
- Discounts available for multiple licenses
- It is also available at a discount as part of our Smart DBA Toolkit bundle
- www.norbtechnologies.com/buysqlsoftware.aspx

SYSTEM REQUIREMENTS

- Designed for SQL Server 2005 and SQL Server 2008
- Supports SQL Server 2000
- Windows XP/Vista/7 (runs on the client)
- The .NET Framework 2.0+ (on client)
- Minimum screen resolution 1024 x 768

SQL Defrag Studio 2009

During normal database usage, inserts, updates and deletes will put your indexes out of order, slowing down performance. When this happens, you need to defrag your indexes.

Quickly find heavily fragmented indexes with the color-coded graphical display

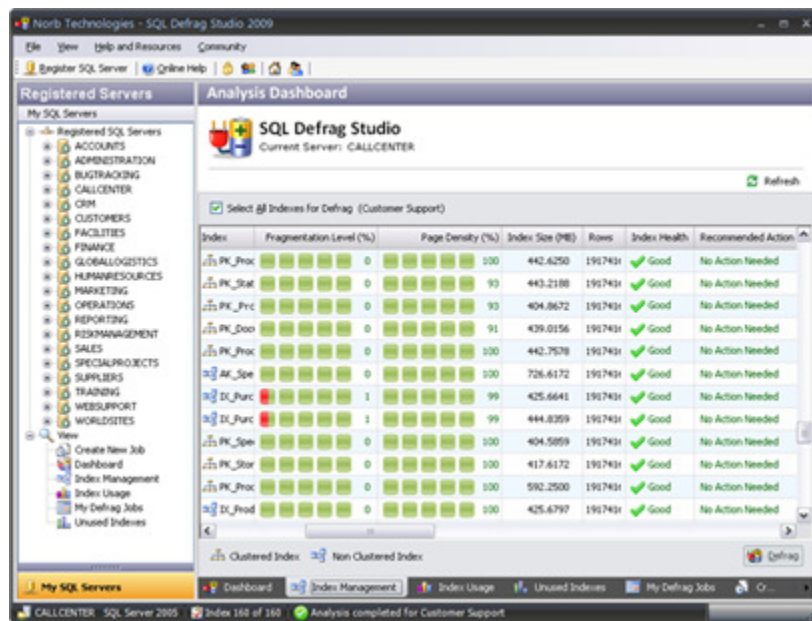

SQL Defrag Studio 2009 is the perfect solution to this problem. SQL Defrag Studio makes fragmentation easy to understand with a simple interface and easy-to-follow recommendations for which indexes are in a bad state.

Simply run SQL Defrag Studio to identify which indexes are fragmented and then defrag only where it's needed. Once SQL Defrag Studio has put your indexes back in order, your queries will run quickly again.

NEW FEATURES

- ✔ Enterprise support for unlimited SQL Servers. Saves login details to save you retyping each time you connect.
- ✔ New and improved user interface – this good-looking tool is now even easier to use.
- ✔ Color-coded graphical view so you can quickly find fragmented hot spots and target these first.
- ✔ The Index Usage Stats tab quickly shows color-coded index read and write usage for each table so you can quickly find activity hot spots in your databases.

- ✔ Quickly find unused indexes so they can be dropped and replaced by indexes on columns that make data retrieval faster.
- ✔ Designed to support tables with over 3 billion rows (should you have one this big!).
- ✔ Identify disabled indexes and re-enable them quickly and cleanly to make indexes and underlying tables operational again.
- ✔ Support for XML, Full Text based tables and Filtered indexes, and indexes on geospatial and geometry columns.
- ✔ The database status shows you which operations can be performed (Analyze and/or Defrag), when a database is in a state other than online e.g. offline, read-only or single user mode.

Defrag your indexes automatically and make SQL Server fast again

file fragmentation was reduced from 99% to 23% in under an hour and the performance of the database was greatly increased.

- Mitch Bonham, DBA, Intekdb, UK

DETAILED FEATURE LIST

Benefits

Analyze fragmentation and defrag indexes within minutes

SQL Defrag Studio analyzes the indexes on your SQL Server and shows you fragmentation levels. SQL Defrag Studio's recommendations show you which indexes you need to defrag. Then you can sit back and relax while SQL Defrag Studio puts your indexes back in order.

Save time and man hours: no more manual scripts to write

It's time-consuming work writing scripts to analyze and defrag your databases. SQL Defrag Studio brings the whole process into one tool to save you time and means you won't have to write and run scripts. Keep it simple with SQL Defrag Studio's easy interface.

Faster SQL Servers mean happy users, customers and managers

Being responsible for your company's databases means you're the first to be called when the server grinds to a halt. Lots of calls from frustrated users or an unhappy boss means extra stress for you. Regularly use SQL Defrag Studio to keep fragmentation away - and that phone that won't stop ringing.

Save money by postponing that hardware upgrade

It's a common mistake to think that a slow SQL Server can be moved to faster hardware to solve the performance lag caused by fragmented indexes. Not true, it just takes the fragmented indexes with it. Before you tell your boss you need to order some costly hardware, use SQL Defrag Studio to remove the fragmentation and save your company money.

Schedule out-of-hours defrag jobs for consistent performance

Defragmenting is a disk intensive job, stealing resources from the server while indexes are re-ordered. Your users won't be happy, so you need to defrag when they're not connected. Don't work overtime or give up your precious weekends to be in the office to defrag your databases. SQL Defrag Studio comes with an automatic scheduler so you can set defrag jobs to run when server usage is at its lowest.

Features

Color-coded display quickly shows index health

Don't waste valuable time hunting for indexes which don't need tuning. SQL Defrag Studio analyzes your indexes and uses color-coding to quickly show you where fragmentation exists. Go straight to the root of your performance problems and rapidly correct the indexes that are slowing your servers down.

Update statistics and recompile procs for a super fast server

It's not enough to just defrag your indexes. Updating statistics and recompiling your stored procedures are the last two steps to a super fast server and help SQL Server's Query Optimizer return results at the best possible speed. Use SQL Defrag Studio to do this automatically so you never forget to complete the whole process.

Flexible reporting - save results to Excel, CSV or XML

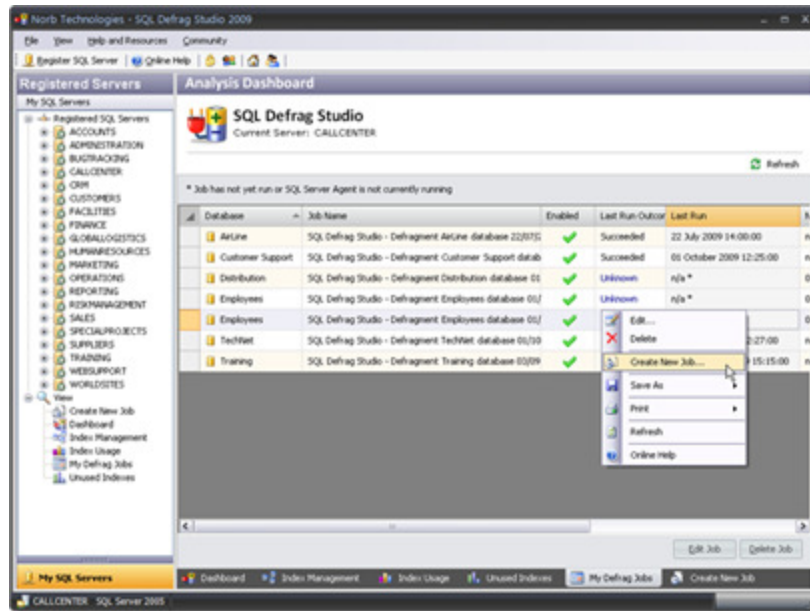

Monitoring index usage and fragmentation over time help you plan for the future growth of your servers. Save before and after results of a defrag job and keep a record of the performance benefits you've delivered to your enterprise. A really useful tool for those DBAs on performance related bonuses.

Easy to use, no learning curve and no training required

SQL Defrag Studio is so easy to use that you won't need to pay any extra costs for support or training. So no annual renewal costs or added extras to your budget each year. We think it's so easy that you won't want to share the secret of a fast server with your colleagues. You'll want to take all the credit for quickly and simply keeping your servers in tip top condition. All without having to do very much at all!

Support for SQL Server 2000, 2005 and 2008!

Don't worry which version of SQL Server you are currently using, SQL Defrag Studio supports all versions from SQL Server 2000 onwards. So whether you run just one version, a combination, or are thinking of upgrading, SQL Defrag Studio will work for you!

Schedule defrag operations outside of core business hours so users aren't affected

we could analyze and take corrective actions within minutes of the product's delivery of statistics on overall database and table fragmentation.

- Richard Jones, Network Administrator, Satuit Technologies, USA

WHY YOU SHOULD BUY

- ✔ SQL Defrag Studio will speed up your SQL Servers by identifying and removing fragmentation.
- ✔ Pay just one price and connect to unlimited SQL Servers to manage ALL your indexes. **A recession-busting price - defrag everything for just \$495!** (discounts available in our shop) – www.norbtechnologies.com/buysqlsoftware.aspx
- ✔ Save your company cash - when customers and employees are waiting for your server to respond, you're losing money. Fragmentation = \$\$\$. SQL Defrag Studio = \$495.
- ✔ Backward compatibility with Visual Defrag 2007 scheduled jobs – automatic import feature means continued management with no extra workload.
- ✔ Now in its third major release since we first launched it in October 2005, this stable product is the easiest and cheapest solution on the market. Our best yet!

Tools for DBAs, written by DBAs

Our products are designed for SQL Server DBAs and developers who need tools to speed up their servers and increase their productivity. All our customers share a common need for the highest quality software, which is reliable, easy to use and delivers results fast.

Smart DBA Toolkit

This bundle combines SQL Enterprise Monitor 2009 and SQL Defrag Studio 2009 at a discounted price, including upgrades for 12 months and technical support. Please visit www.norbtechnologies.com/buysqlsoftware.aspx to make your purchase.
